

Onboarding Form - Flowroots

Your Name *

Nir Eidelberg

Your Company Name *

MovePlnr

Your Website *

moveplnr.com

Business address (*city and country at minimum – used in your outreach copy*) *

Calgary, AB, Canada

Best phone number to reach you for business purposes *

+1(403)472-2888

How we'll communicate *

We run all day-to-day communication through a dedicated **Slack Connect channel** shared between your workspace and ours. It keeps everything (campaign updates, lead notifications, weekly reports, quick questions) in one searchable place.

Who from your side should be in the channel?

List name, role, and email for everyone we should invite. Include anyone who needs visibility on leads, approvals, or weekly reporting.

(Most clients add: the founder or main lead on your side, plus whoever's handling the booked calls.)

Yes

What scheduling tool do you use for sales calls? (ex. *Calendly, Cal.com, or other*) *If you don't have one, mention it.* *

Calendly

Scheduling tool login email (If exists)

Scheduling tool login password (If exists)

(We book meetings on your behalf, we need access to your calendar. Send these here or via your preferred communication channel if you prefer not to share in a form.)

Section 2: About Your Business

Who do you help? What result can you get them? Is there a specific timeframe? How do you get these results? Please answer each of these questions in fine detail. *

We help independent and growing moving companies across North America that are losing revenue to disorganization, manual processes, and disconnected tools. Our ideal customer is a moving company owner or operator managing between 2 and 20 trucks who is doing between \$500K and \$10M in annual revenue. They are typically running their business across a mix of spreadsheets, WhatsApp, paper forms, and anywhere from 3 to 7 separate tools that do not talk to each other.

The result we get them is more closed jobs, higher revenue per job, and a business they can actually manage and scale. Our anchor customer, Cactus Moving, went from \$2M to over \$7M in annual revenue and scaled from 1 city to 6 cities and from 13 trucks to 51 trucks — all while running on MovePlnr. Their monthly move volume grew from 372 to over 1,095 moves. Their close rate consistently runs between 70% and 93% on qualified leads.

In terms of timeframe, most operators see meaningful improvement in lead capture and quote speed within the first 2 weeks. Close rate improvements typically show up within 60 days as pipeline visibility and follow-up automation kick in. Revenue growth compounds from there as dispatch efficiency improves and analytics surface what is actually working.

We get these results by replacing every disconnected tool with one closed-loop platform. Pipeline management captures every lead from every source automatically. AI-powered quoting generates margin-protected estimates in seconds instead of hours. Dispatch optimizes crew and truck assignments. Automated follow-up sequences keep leads warm without manual effort. Analytics track revenue, conversion, and rep performance across the whole business in real time. Every action in one stage trains the system for the next.

What EXACTLY do you sell to your Target Market? Explain it in VERY fine detail. Please tell us ★ EVERYTHING in your own words. As many details as possible, please.

MovePlnr is a purpose-built operating system for moving companies. It replaces every disconnected tool an operator is currently using – CRM, quoting, dispatch, payroll, follow-up, analytics – with one platform where every workflow connects to the next.

We sell a monthly subscription per location, structured around move volume so operators only pay for what they actually use:

Free – up to 10 moves a month, no credit card required. Full platform access. No time limit.

Starter – up to 30 moves a month at \$100/month.

Growth – up to 100 moves a month at \$249/month. This is our most widely used plan and the one the platform is designed around.

Scale – unlimited moves at \$500/month for high-volume operators.

No long-term contracts. Cancel any time.

Here is exactly what the platform does:

Pipeline management. Every inbound lead – phone call, web form, live chat, email, SMS – is automatically captured, classified, and queued. Nothing disappears. Sales reps have a clear view of every open opportunity and what action is needed next.

AI-powered quoting. The platform generates detailed, professional estimates in seconds. Quotes are margin-protected – the system accounts for labour, truck size, distance, floor count, and special items automatically. Operators send estimates by email or SMS with one click. Customers can accept directly from their phone.

Dispatch. Full crew and truck management from one dashboard. Assignments go out through the app.

Day-of communication is logged. When something changes mid-job, the whole team knows instantly.

Automated follow-up. Timed email and SMS sequences run automatically between first contact and booking. Leads that go quiet are flagged. The sales team closes more without working harder.

Analytics and reporting. Revenue by period, close rate by rep, conversion by lead source, payroll breakdowns, Google review performance – all in one place, always current.

Live add-ons already in production. Storage coordination with AI-assisted unit sizing and visualisation.

Stripe Connect for in-platform payment processing. Google Business Profile review collection and analytics.

RingCentral telephony integration. Tawk.to live chat lead capture. Full payroll management.

Built-in BDR sales management tools including prospect queues, outreach sequences, and funnel metrics.

This is not a CRM with extra features bolted on. It is the only platform built from the ground up for how moving companies actually operate.

What are some PROBLEMS your ideal clients have that you solve for them? Please share at least 3-5 specific pain points your clients are known to have. *

1. Leads disappear before anyone follows up.

The average moving company loses between 40 and 50 percent of inbound leads simply because there is no system to catch them. A lead comes in by phone while the owner is on a job. A web form submits at 9pm. A chat message goes unanswered over the weekend. By the time someone gets to it, the customer has already booked elsewhere. MovePlnr captures every lead from every channel automatically, puts it in a queue, and makes sure nothing is invisible.

2. Quotes take hours and pricing is guesswork.

Most moving companies write estimates manually in a spreadsheet or a Word doc and send them hours — sometimes a full day — later. There is no margin protection built in. The owner prices by instinct, frequently undercharging on complex jobs and only discovering the problem at close. MovePlnr generates a professional, margin-protected estimate in seconds. The faster response alone lifts close rates. The protected margin improves profitability on every job.

3. Dispatch runs on WhatsApp and paper.

Crew assignments happen in a group chat. Job details live on a printed sheet or a whiteboard. When something changes mid-day — a customer adds items, a truck is delayed, a job runs over — the communication chain breaks down and crews are left guessing. There is no record, no accountability, and no visibility for whoever is managing the day. MovePlnr gives coordinators a real-time dispatch dashboard and gives movers their assignments and updates through the app.

4. Every tool operates in a different silo.

The typical operator runs separate tools for CRM, quoting, invoicing, payroll, and communication — and none of them share data. The sales rep quotes in one system, the dispatcher works from a spreadsheet, the owner does payroll in a third tool. Every handoff between systems is a potential error, a duplication, or something dropped entirely. MovePlnr connects all of it so information flows through the whole business automatically.

5. No visibility into what is actually working.

Most moving company owners cannot tell you their close rate, their best lead source, their average job value, or their top-performing sales rep — because the data is scattered and nobody is aggregating it. Decisions get made by gut feeling. MovePlnr surfaces all of it in real time so owners can manage the business on data, not instinct.

6. Growth breaks everything.

The tools that work at five trucks fall apart at fifteen. WhatsApp dispatch cannot manage forty jobs a day. A shared Google Sheet cannot handle six cities. The systems an owner used to start the business become the ceiling on how far it can grow. MovePlnr scales from one location to many without rebuilding anything — the platform handles the complexity so the operator can focus on growth.

Our copy is QUESTION-BASED. With that said, are there any questions you can think of that your prospects would likely respond to? Think about a scenario where you were cold calling a prospect — what questions would you ask them? *

These are the questions that open real conversations with moving company owners:

"How many moves are you doing a month right now — are you above or below 30?"

"If a lead comes in at 9pm on a Friday, what actually happens to it?"

"How long does it take your team to get a quote out the door?"

"Do you know your close rate off the top of your head?"

"How are you dispatching your crews today — is it still over WhatsApp?"

"How many separate tools does your team use on a typical day just to run operations?"

"If you opened a second location tomorrow, could your current setup handle it?"

"Do you know which lead source is converting best for you right now?"

"What happens when a customer changes their inventory the morning of the move?"

"How long does it take you to figure out what your best rep is doing differently from everyone else?"

The single most effective opener is the lead loss question. Moving company owners already know, somewhere in the back of their mind, that they are losing leads — they just have never put a number on it. Putting it in front of them concretely stops the scroll and opens the door to a real conversation.

The move volume question is the best qualifying question. It identifies which plan they belong to, signals their readiness to pay, and gives the closer a natural way into the conversation about the free trial or the Growth plan.

Do you offer any GUARANTEE to your clients? If so, what is it exactly? *

We offer a permanently free plan for operators doing up to 10 moves a month — no credit card required, no time limit, full platform access. Operators can experience MovePlnr in their actual business before spending a dollar. That is not a trial. It is a working version of the product with no expiry.

For operators who grow into a paid plan, there are no long-term contracts. Monthly billing, cancel any time.

Our strongest proof point is a live, documented case study. Cactus Moving has been running on MovePlnr since April 2024. In that time they generated over \$7 million in operator revenue, scaled from one city to six, grew their fleet from 13 to 51 trucks, and tripled their monthly move volume. Their close rate runs consistently between 70 and 93 percent on qualified leads. That result is real, verifiable, and available for any prospect who wants to see the numbers.

We also back the product with continuous development — over 190 production releases shipped in the past several months. When an operator is on MovePlnr, they are on a platform that improves every week based on what real operators are asking for.

Drop any links related to your offer here: landing pages, VSLs, pitch decks, or any marketing material or asset that explains what you do and how you help. *

These can be URLs or Google Drive links (*make sure sharing is set to "Anyone with the link can view"*).

You can also add them directly to the **Additional Resources** card on your campaign board — if you drop them here, we'll move them there ourselves.

moveplnr.com

Your Ideal Client And Past Efforts

Who EXACTLY is your Target Market? In other words, who would you like us to send cold emails to on your behalf? What are their Job Titles? Please tell us EVERYTHING you know about them — Location, Revenue, Company Size, Industry, and anything else relevant. Please provide detailed answers for each subcategory for optimal results. *

Primary — these are the decision makers and budget holders:

Owner
Founder
Co-Founder
President
General Manager
Director of Operations

Secondary — these are influential and often forward software decisions upward:

Operations Manager
Sales Manager
Office Manager

Avoid: individual movers, drivers, labourers, and dispatchers. They are not buyers.

Location:

British Columbia, Alberta, Ontario are the highest-density provinces for independent moving companies.

United States: California, Texas, Florida, New York, and Illinois are the highest-volume states. English-speaking markets only for this campaign.

Company size:

3 to 30 full-time or part-time employees

2 to 20 trucks in active fleet

Doing between 30 and 150 moves per month (this maps directly to our \$100 to \$500 pricing tiers)

Annual revenue between \$500K and \$5M CAD

Industry:

Residential moving companies

Local and long-distance household movers

Commercial moving companies (secondary)

Senior moving specialists (secondary — high-value, less price sensitive)

Other signals that indicate a good fit:

Company has been operating for 2 or more years (past the survival stage, ready to invest in systems)

Has a Google Business Profile with 50 or more reviews (shows they care about reputation and have real volume)

Has a website with an online quote form or booking widget (indicates some digital maturity)

Active on Facebook or Instagram promoting their services (marketing-aware owner)

Lists multiple service areas or cities on their website (scaling or wants to scale)

Has staff beyond just the owner (means there is a sales or operations process to improve)

Who to avoid:

Solo operators doing under 10 moves a month (free tier only, no near-term upgrade path)
Moving brokers (they do not have trucks or crews — different business model)
Freight-only companies (our product is not built for them yet)
Large enterprise national carriers — they have enterprise software already

Are these companies hiring for any specific roles that would give us insight into their need for your offer? (ex. *hiring for sales reps, hiring for a new CMO, hiring for developers, hiring for a new CEO, etc.*) *

Yes. Job postings are excellent intent signals for this market. Target companies that are actively hiring for:

Moving consultant / sales representative — they have a sales team or are building one, which means they need pipeline management and quoting tools

Dispatcher — active dispatch hiring means their current dispatch system is breaking under volume

Operations coordinator or operations manager — they are systemising, which is exactly when software becomes a priority

Customer service representative — fielding a volume of inbound that manual processes cannot handle

Office administrator or office manager — overwhelmed back office, classic MovePlnr customer profile

A company hiring for two or more of these roles simultaneously is a very high-priority prospect. They are in growth mode and feeling the operational pain directly.

Do your prospects use any specific technologies that you know of that we can base our targeting on? (ex. *Shopify, Klaviyo, Salesforce, HubSpot, Google Analytics, etc.*) *

Technologies that indicate they are digitally active but not yet using a purpose-built moving OS: CRM and sales tools (they use these but they are not built for moving):

HubSpot (free tier most common – they outgrew it)
Jobber (field service, not moving-specific)
ServiceTitan (expensive, overkill, not moving-specific)
Monday.com or Notion (spreadsheet-style, no quoting)
Pipedrive

Booking and quoting tools (generic, not integrated):

vcita
Calendly (for demo bookings only, not dispatch)
Google Forms
Typeform

Communication tools (symptoms of no real platform):

WhatsApp Business
Google Workspace (Gmail, Sheets for dispatch)
RingCentral (phone system only, no CRM connection)

Payment tools (disconnected from operations):

Stripe standalone
Square
PayPal Business

Marketing tools (shows they are spending on leads):

Google Ads
Facebook / Instagram Ads
Thumbtack
Yelp for Business

A company running Google Ads or Facebook Ads to generate leads, using Calendly to book demos, and managing dispatch over WhatsApp is the perfect MovePlnr prospect. They are spending money to generate leads they are then mishandling.

Please provide a list of as many KEYWORDS as possible that we can use to scan for when building your lead list. Think industry terms, phrases they use on their websites or LinkedIn, job description keywords, or technologies. *(ex. if you're targeting email marketing agencies, keywords like "email flows," "Klaviyo," or "eCommerce email" would work well – we'll scan their websites and social profiles for these)* *

Website and LinkedIn keywords:

moving company
residential moving
local movers
long distance moving
moving and storage
furniture movers
household moving
commercial movers
office relocation
senior moving
packing and unpacking
full service moving
moving estimate
free quote moving
licensed and insured movers
bonded movers
CAMSC certified (Canada)
CAM certified mover
BBB accredited mover

Operational keywords (signals they are growing and feeling pain):

"book your move online"
"instant quote"
"same day moving"
"last minute movers"
"serving [multiple cities]"
"our fleet"
"our team of movers"
"fully equipped trucks"

Job posting keywords to scan:

"moving consultant"
"relocation coordinator"
"dispatch coordinator"
"moving sales"
"move coordinator"
"customer experience moving"

Company description keywords:

residential moving
 long distance moving
 local moving
 moving and storage
 relocation services
 household goods
 furniture delivery
 packing services

Have you done any cold outreach before – email, LinkedIn, or otherwise? If yes, what worked ★ and what didn't?

Yes. The team has been running an active phone outreach campaign.
 What the data shows:

30 to 46 calls per day per BDR
 Connect rate approximately 5 to 10 percent
 Appointment set rate approximately 1 to 2 per day on a strong day, often zero
 Voicemail accounts for roughly 50 percent of all dials

What is working:

Direct calls to owners by name get the best responses
 Follow-up calls after voicemails occasionally convert
 Inbound leads from Facebook and Instagram are converting faster than cold calls when followed up quickly – one demo was closed from an inbound lead in the same session

What is not working:

High no-answer rate on cold dials
 Zero appointment rate on many days despite high call volume
 Generic "not interested" responses with no reason given – suggests the pitch is not landing fast enough before they hang up

The dominant objection on calls: "Already has a CRM system" – this comes up repeatedly across multiple BDRs and multiple days. It is the single most important objection to address in cold email copy. The counter is that MovePlnr is not a CRM – it is a purpose-built moving OS that replaces the CRM along with four other tools. A generic CRM does not do quoting, dispatch, payroll, or follow-up automation for moving companies. That distinction needs to be sharp and early in every email.
 Secondary objection: Multi-year binding contracts with existing software providers. When this comes up, the play is not to fight the contract – it is to book a future-dated demo and stay warm until the contract expires.

Do you have any previous outreach scripts or email sequences you've used?

If yes, please paste them below or drop a Google Drive link (*view access*). Even bad ones are useful — we want to know what's already been tried.

No cold email sequences exist yet. Phone scripts are in use but have not been shared in written form.

This campaign will be the first structured cold email effort.

The phone data above is the most useful reference for what objections to pre-empt and what questions open conversations. The "already has a CRM" objection in particular should be neutralised in the subject line or first sentence — prospects need to understand immediately that this is not another CRM pitch.

Do you have any existing lead lists from previous outreach, CRM exports, or purchased databases?

If yes, please drop a Google Sheet or Drive link here — we'll take it from there and add it to your campaign board.

The current BDR operation is working from a manually built list of moving companies.

 **Drop links to LinkedIn profiles of ideal clients, example company websites, or any other targeting references that help us understand who we're going after.** *

These can be URLs or Google Drive links (*make sure sharing is set to "Anyone with the link can view"*).

You can also add them directly to the **Additional Resources** card on your campaign board — if you drop them here, we'll move them there ourselves.

Your Results & Proof

Please type out any RESULTS you've gotten for your clients. Have they profited from working with you? What niche were they in? And how did they become a client in the first place? *

very customer we work with is a moving company. That is the only niche we serve. The problems are the same across the board — leads being missed, quotes taking too long, dispatch running on WhatsApp, and owners who cannot see what is actually happening in their business without asking someone for a spreadsheet.

The results we get them fall into three categories. First, more leads captured and closed — because pipeline visibility and automated follow-up replace the manual process that was missing them. Second, higher revenue per job — because AI-powered quoting replaces guesswork with margin-protected estimates. Third, the ability to scale without rebuilding everything — because the platform handles multiple locations and growing job volumes without the owner needing to add headcount to manage the chaos.

Our clients find us in three ways. The first is word of mouth within the moving industry — operators talk to each other and when one is visibly growing, others ask what changed. The second is inbound from Facebook and Instagram advertising, where we target moving company owners directly. The third is outbound phone and email outreach to independent moving companies across Canada and the United States.

What is your most recent CASE STUDY and what positive results did you achieve? Please provide as many case studies as you have using the framework from the examples below. *

Example #1: "Just recently we helped [BRAND] increase their monthly revenue from \$12k to \$34k/month in just one month working with us."

Example #2: "We helped [CLIENT], a [TYPE OF BUSINESS] similar to yours, go from [BEFORE] to [AFTER] in [TIMEFRAME] by [METHOD]."

Example #3: "We just helped [NAME] add \$220k worth of new client revenue in their first month working with us."

Case Study 1 — Cactus Moving (anchor case study, full data)

"We helped Cactus Moving, a residential moving company in Western Canada, grow from \$2M to over \$7M in annual operator revenue in under 24 months working with MovePlnr — scaling from 1 city to 6 cities and from 13 trucks to 51 trucks in the same period."

Revenue: \$2M to \$7.05M in 24 months (May 2024 to March 2026)

Fleet: 13 trucks to 51 trucks (+292%)

Monthly move volume: 372 to 1,095 moves per month (3x)

Cities: Calgary, Edmonton, Toronto, Vancouver, Ottawa and growing

Close rate: 70 to 93% on qualified leads consistently

Peak month: \$520,000 in August 2025

How they became a client: Sam Grinshpon, MovePlnr's CEO and co-founder, built the platform from inside Cactus Moving. He is the founder of both. He needed the product himself, built it, and Cactus became the proof of concept that every other prospect is shown.

Case Study 2 — 519 Movers, Ontario

"519 Movers, an Ontario-based residential moving company, is actively processing their full lead pipeline through MovePlnr — every Google form submission flows directly into the platform and is queued automatically for follow-up."

519 Movers is a live paying customer on MovePlnr. Their Google lead integration is active and operational — every inbound lead from their website is captured automatically and fed into the CRM without manual entry. Before MovePlnr, this process was manual. Now every lead is timestamped, classified, and queued the moment it submits.

Specific revenue data for 519 Movers has not been shared publicly, but they are a real, verifiable customer using the platform in live daily operations. The name and Ontario market presence make them a strong reference point for any prospect in the region.

How they became a client: Inbound — they found MovePlnr and converted to a paying subscription. Their Google integration was built and debugged by the MovePlnr team directly, which speaks to the level of hands-on onboarding support provided to early customers.

Case Study 3 — East Core Logistics, Canada

"East Core Logistics is an active MovePlnr customer using the platform's contract signing, dispatch, and operations workflows in their daily business."

East Core Logistics is a verified paying customer on MovePlnr. They are using the platform's contract annotation and digital signing features, which replace the manual paperwork process most moving companies still rely on. Their team has been engaged with the product team directly on feature

improvements — the kind of relationship that reflects a customer who is genuinely embedded in the platform rather than just signed up.

Case Study 4 — Alberta Top Notch Movers, Alberta

"Alberta Top Notch Movers, a growing residential mover in Alberta, was running their entire operation on spreadsheets when they first demoed MovePlnr. After seeing the platform, their operations manager immediately identified it as a solution to their scaling problem."

From a sales call in July 2025: Zella, who manages operations, had never used a purpose-built moving platform before. Everything was tracked in spreadsheets. After seeing MovePlnr's quoting, dispatch, and lead management in a live demo, she told the team she could already see her staff using it. The company was in active scaling mode — small team but growing — and the per-location pricing model was a direct fit for where they were headed.

One honest note for the form: specific quantified revenue results for 519 Movers and East Core Logistics have not been formally documented the way Cactus has been. Until those case studies are written up with the customer's consent, use them as reference names for social proof (they are real, verifiable customers in the moving industry) but anchor the performance claims on Cactus data where precision matters.

Your Goals

How many sales calls are you currently generating each month on average? *

We are currently generating between 15 and 20 qualified demos per month across all channels.

Our BDR team in April 2026 — three reps making 30 to 60 calls each per day. In our first full month we booked 14 demos from 1,636 calls at a 10.8% connect rate. Accounting for no-shows, we are conducting roughly 10 to 12 of those per month.

On top of that, we run paid ads on Facebook and Instagram targeting moving company owners directly. Those inbound leads convert faster when followed up quickly and add another 3 to 5 qualified demos per month.

The rest comes from the founders reaching out directly and occasional word of mouth within the industry.

Total across all sources: roughly 15 to 20 demos booked per month, with 10 to 14 actually conducted.

How many sales calls are you looking to generate from us each month? *

We are looking to add 10 qualified demos per month from cold email, bringing our total pipeline to 20 to 25 qualified demos per month across all sources combined.

We are not chasing raw volume. We want the right 10 conversations — operators who are doing at least 30 moves a month, running their business across disconnected tools, and ready to make a change. That is the profile that shows up to the demo, sees it immediately, and converts. Our closer can handle the volume we have. What we need from cold email is consistent, qualified, incremental pipeline on top of what our BDR team and ads are already producing.

We are still targeting 50 paying customers by end of 2026. At our current close rate, 20 to 25 qualified demos per month is what gets us there.

If you could get one thing out of working with Flowroots to make it a smashing success for you, what would that be exactly? *

Ten qualified demos per month with moving company owners who are genuinely feeling the pain of running their business on tools that were not built for moving.

We have everything else we need. The product works — our anchor customer Cactus Moving went from \$2M to \$7M in two years on MovePlnr. We have a closer. We have a BDR team on the phones every day. We have inbound coming from Meta ads. What we need from cold email is a reliable, additional channel that puts 10 more of the right people in our calendar every month without us having to manage it.

The operator we want to reach is doing 30 to 100 moves a month, has a small but growing team, and is starting to feel the ceiling on what spreadsheets and WhatsApp can handle. When they get an email that speaks directly to that moment — not a generic software pitch, but something that sounds like we know exactly what their Tuesday looks like — they book the call themselves.

If Flowroots can deliver that consistently, it directly closes the gap to 50 customers by end of year.

This form was created inside of Flowroots.
